

*This 'call for abstracts' invites original contributions aligning with the theme of the event, or other related material. Speakers should come from industrial end-user companies but may be nominated by solution providers.*

# Call for Abstracts

## PLM Road Map & PDT North America 2024

**Value Drivers for Digitalization of the Product Lifecycle**

*Insights for the PLM Professional—Why the investment, what are the returns, and how are they achieved?*

8-9 May 2024

The Marriott Hotel  
Tysons Corner, VA USA

Most companies are actively engaging in a digital transformation journey, often within the context of a broader business transformation program. For companies that develop, produce, and/or service products, the scope of transformation is **full lifecycle**—extending across the interconnected value chain of customers, partners, and suppliers. Billions of dollars are being invested in model-based this and that and digital everything. Examples include model-based definition, model-based systems engineering, model-based enterprise, digital engineering, digital twins, digital threads, and so on.

While every facet of a digital transformation is important, there is a growing realization that elevating the **data perspective** is critical to success. There has been a paradigm shift in motion for decades to transition from document-based to model-based representations of product information. The next leap is enabling ready access and interpretation of the information within these digital representations and other digital resources through data architectures, standards, governance, and tools such as AI.

At PLM Road Map & PDT 2024, we will highlight the shift towards data enablement by offering insights into where industrial end-user companies are today and how they can benefit from it in the future.

**Possible presentation topics could consider these topics:**

- The factors driving investment in product lifecycle digitalization. The goals, value achieved, and lessons learned
- The strategic positioning of digital threads and digital twins within a product lifecycle digitalization program
- How MBSE and MBE support and build on product lifecycle digitalization
- How AI builds upon and enables product lifecycle digitalization
- Extending product lifecycle digitalization across suppliers and customers and addressing the inherent security concerns
- How the data perspective can reshape established processes like configuration management
- The role of data governance and how to design trust into the data to enable increased automation
- Standards relevant to product lifecycle digitalization
- Developing people skills for today and the future
- Explaining product lifecycle digitalization to stakeholders outside of PLM Professionals
- The role of CXOs and the Board in driving product lifecycle digitalization and how to get their sponsorship
- Building on product lifecycle digitalization to achieve an environment, social, and governance operation and how to capture sustainability and circular economy opportunities

**Key dates:**

2 January	Call for speakers/abstracts open
2 February	Abstracts due
8-9 May	Conference

**Process:**

Submit your **presentation topic and title, a description of what you will talk about** (about 200 words), **and speaker information (name, company, job title)** to [c.peck@CIMdata.com](mailto:c.peck@CIMdata.com) by 2 February.

**Questions?** Visit <https://www.cimdata.com/en/education/plm-conferences/2024-plm-road-map-pdt-north-america> or email Cheryl Peck at [c.peck@CIMdata.com](mailto:c.peck@CIMdata.com)
