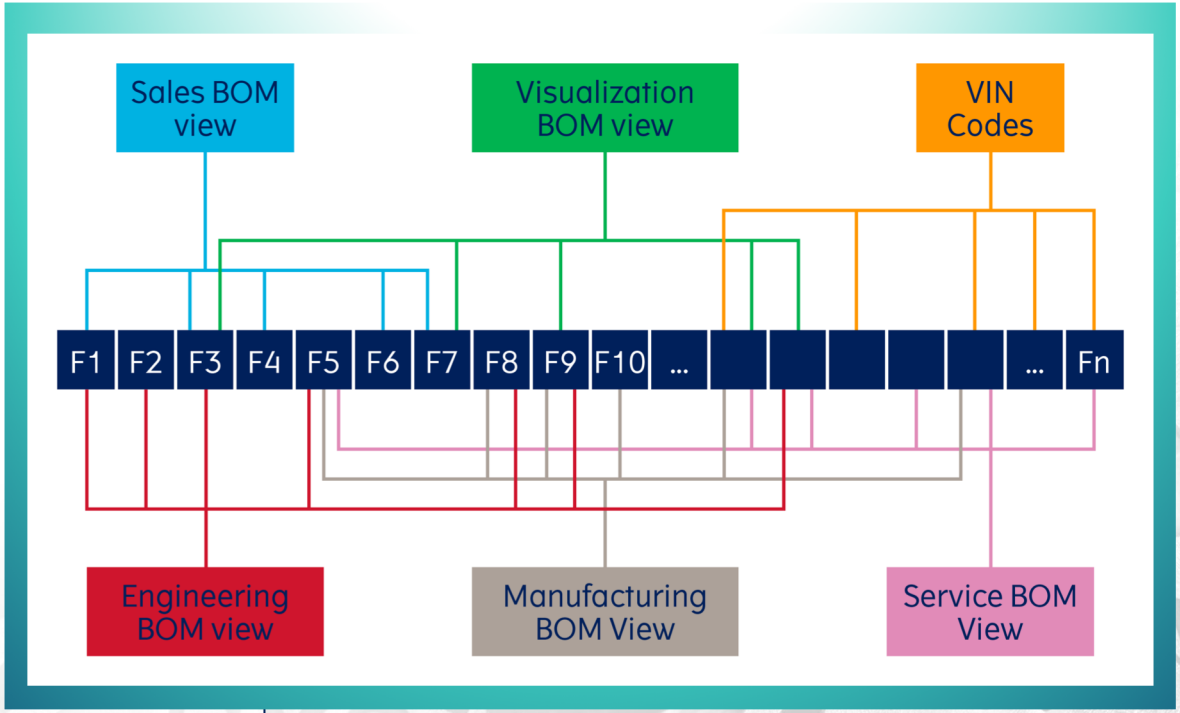
Configuration Lifecycle Management

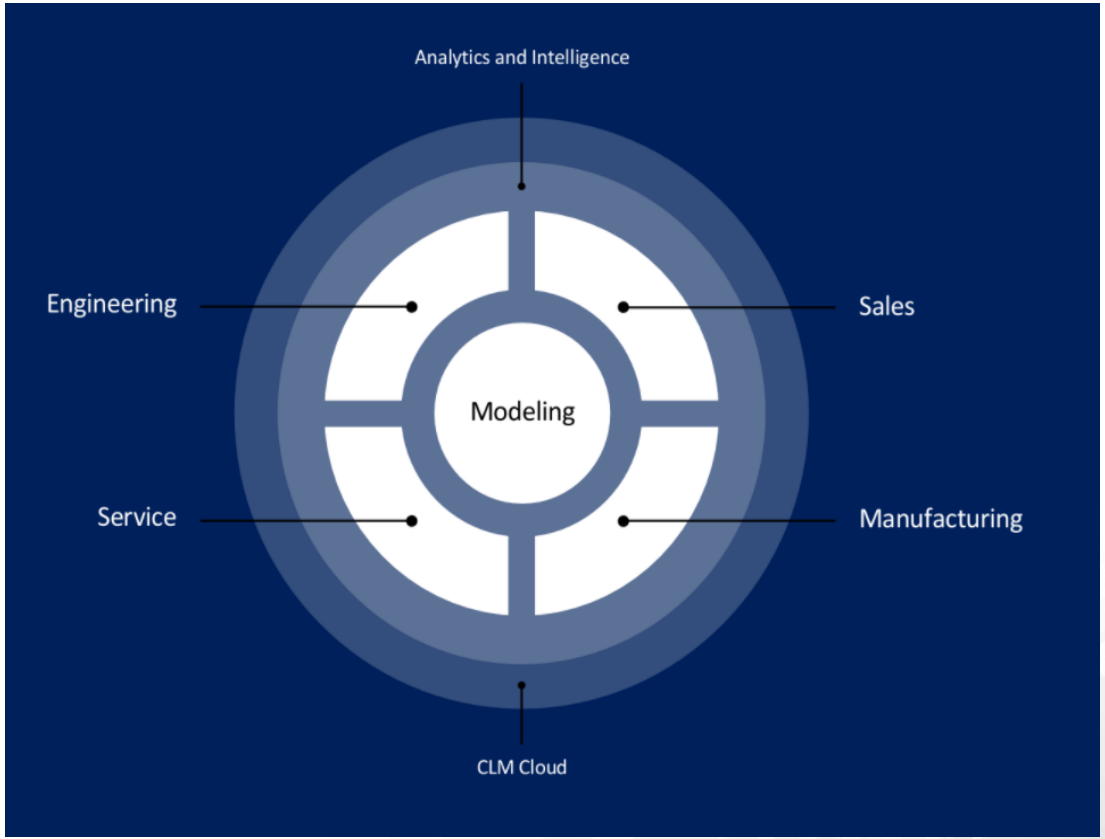
Configuration Lifecycle Management (CLM) is the management of all product configuration definitions and configurations across all involved business processes applied throughout the lifecycle of a product.

The Configuration Thread

Configuration model
- product structure
- configuration rules

Customer Order specification





Configuration Modeling must offer --

- Ability to represent rules from all functions
- Enterprise – collaboration capabilities
- Calendar and effectivity management
- Markets and market applicabilities
- Powerful rules and runtime

Products Based on VT™ Technology
