CIMdata Defining What Comes Next in Digital Transformation

Strategic management consulting for competitive advantage in global markets

The leading independent authority on PLM and its digital transformation. We provide research, education, and strategic consulting to clients around the world.

OUR MISSION:
Maximizing clients' ability to design, acquire, deliver,
and support innovative products and services.

CIMdata

Peter A. Bilello, President & CEO

Professional background

- More than 36 years of experience in the development of IT solutions for research, engineering, and manufacturing organizations worldwide
- Led numerous projects in PLM analysis, selection, implementation & management, synchronous and lean manufacturing consulting & software engineering, as well as general data management & governance strategy development and support
- Authored many papers & research reports on PLM and related topics, as well as numerous articles, commentaries, and perspectives that have appeared in publications throughout the NA, EMEA & Asia
- Holds a B.S. in Computer Science (minor in Physics) & M.S.E. in Manufacturing Systems Engineering

Value Drivers for Digitalization of the Product Lifecycle

PLM Road Map™ & PDT North America 2024—8 May 2023

Key Takeaways

- As PLM professionals, we must continually look to enhance the value resulting from the digitalization of the product lifecycle
 - This requires keeping an eye on the evolving trends & enablers of successful digital transformation
 - CIMdata's Critical Dozen represents a comprehensive set of trends & enablers
- Maximum value will only result from a holistic, end-to-end approach
- Don't forget, organizational change management plays a critical role in maximizing adoption and value delivery
- Evolving customer demands & market opportunities are motivating investment in digitalization of the product lifecycle

5 Copyright © 2024

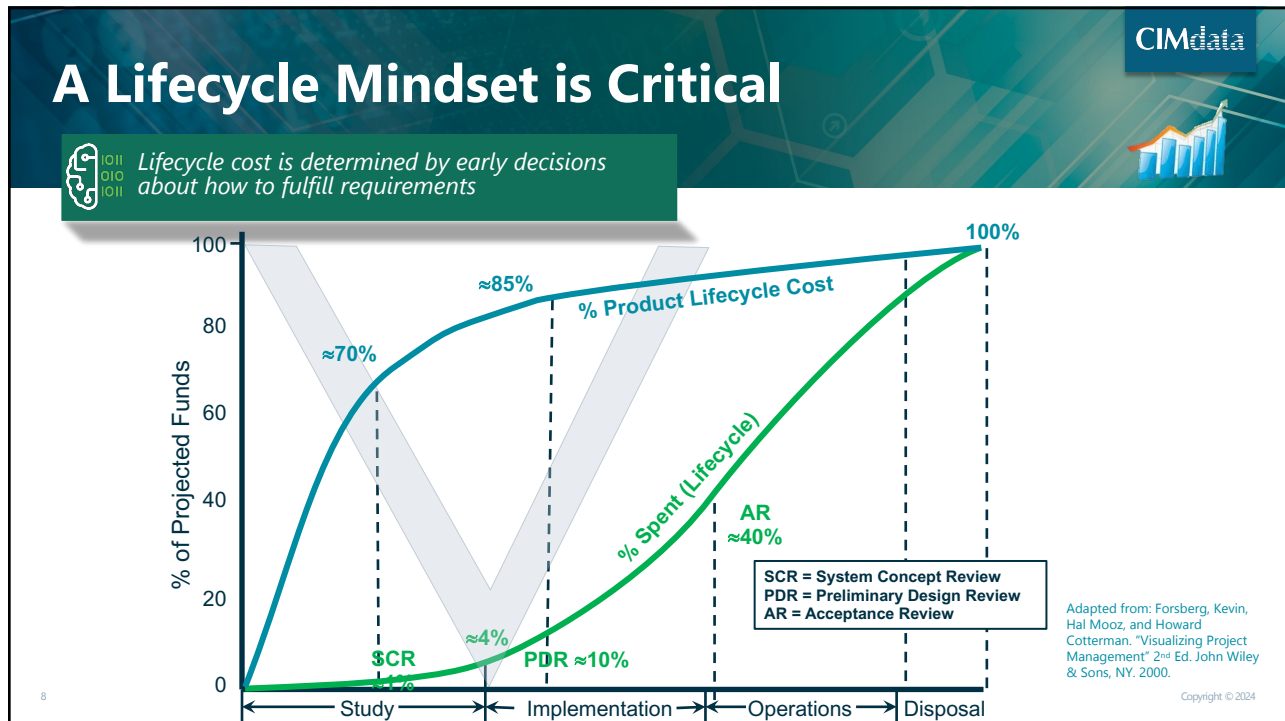

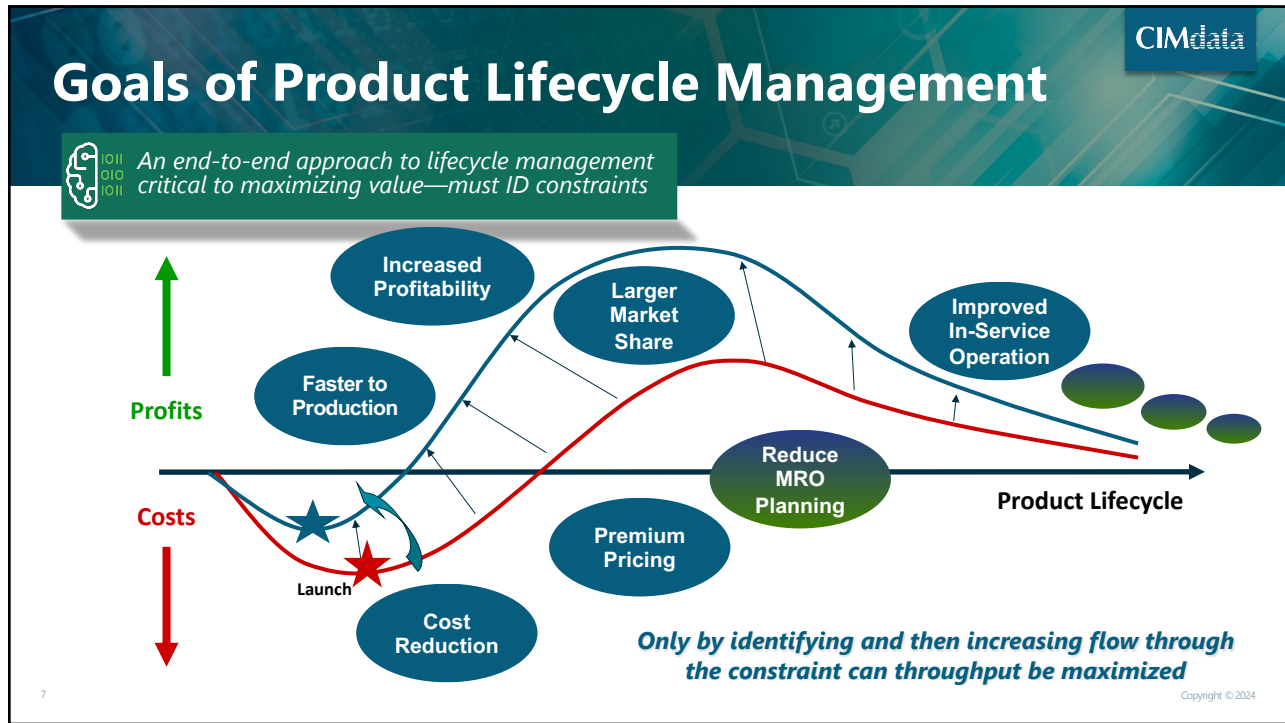

Agenda

- A Lifecycle Mindset is Critical to Maximize Value
- CIMdata's Critical Dozen: An Update
- Organizational Change Management's Role
- Today's Main Motivating Factors
- Concluding Remarks

Value Drivers for Digitalization of the Product Lifecycle

PLM Road Map™ & PDT North America 2024—8 May 2023

CIMdata

3 Key Factors Maximize Value

 People, technologies, and processes are and must be interrelated

- You cannot maximize benefits by improving one of these 3 in isolation
- Applying new technologies in out-of-date ways just allows people to create errors & take bad decisions more quickly
- People are adept at using tools & processes incorrectly—they must be trained in the tools & the processes

Value Drivers for Digitalization of the Product Lifecycle

PLM Road Map™ & PDT North America 2024—8 May 2023

Ensure All Data is Under CM Control

 **CMPIK definition of Configuration Management**

03
Configuration management

Configuration Management is a set of inter-related processes, management techniques, and CM supporting tools that assures:

- (1) Our products, facilities, IT Systems, services, processes, etc., are **what they are intended to be**
- (2) That **changes** to our products, facilities, IT systems, services, processes, etc. are **properly evaluated, authorized and implemented**
- (3) That **all information** necessary to define and manage our configurations and data is kept:
 - (a) **current and accurate**
 - (b) is **structured** for all users needs and
 - (c) is readily **available** to all who need to know

15 Image Copyright 2008-2011 CMPIC LLC, reprinted with permission

Copyright © 2024

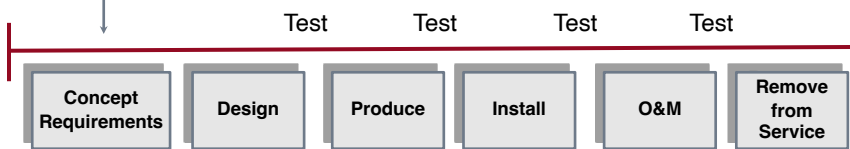

When Does CM Begin?

 **All parts required for CM activities**

03
Configuration management

Configuration Management Begins Here...

↓

...and continues throughout the product lifecycle.

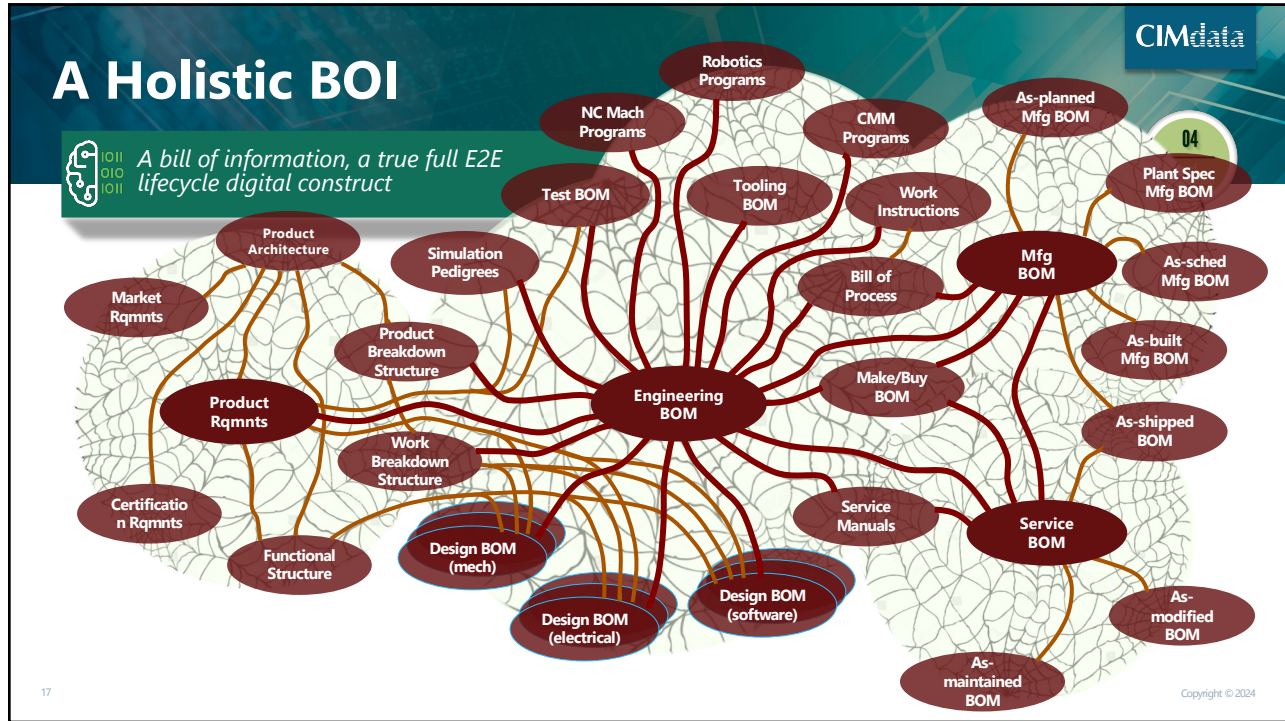

Various organizations may be responsible for change management as the product moves through its lifecycle.

Value Drivers for Digitalization of the Product Lifecycle

PLM Road Map™ & PDT North America 2024—8 May 2023

Model-Based Structures

Many types of model-based structures supporting disciplines throughout the product lifecycle

05
Model-based structures

- **Model-Based Enterprise (MBE)** – “a vision to transform an enterprise’s engineering, manufacturing, and aftermarket services through product data reuse and derived context, rather than interpreting inputs and recreating the models and drawings.”
- **Model-Based Systems Engineering (MBSE)** – “the formalized application of modeling to support system requirements, design, analysis, verification and validation activities beginning in the conceptual design phase and continuing throughout development and later life cycle phases.”
- **Model-Based Engineering (MBE)** – Integrated use of models to define the system technical baseline across the full life cycle, across all disciplines, across all program members
- **Model-Based Definition (MBD)** – The practice of using 3D models (i.e., solid models, 3D PMI and associated metadata) within 3D CAD software to define (provide specifications for) individual components and product assemblies.
- **Model-Based Design (MBD)** – “A mathematical and visual method of addressing problems associated with designing complex control, signal processing and communication systems as applied in the design of embedded software.”

CIMdata's Critical Dozen

The Top 12 Trends and Enablers of Digital Transformation

12 familiar, evolving trends & key enablers of digital transformation that you cannot, or should not, live without.

- 01 End-to-end connectivity
- 02 Data & process management
- 03 Configuration management
- 04 Bills of information
- 05 Model-based structures
- 06 Digital thread/twin
- 07 IoT & PLM
- 08 Changing views of "product"
- 09 Big data & analytics

Copyright © 2024

Digital Thread

CIMdata's preferred definition

06 Digital thread/twin

- A **communication framework** that allows a connected data flow & integrated view of an asset's data (i.e., its Digital Twin) throughout its lifecycle across traditionally siloed functional perspectives

Digital thread is enabled and supported by a robust end-to-end and connected systems model and MBSE processes

The diagram illustrates the Digital Thread as a central concept connecting various lifecycle stages and systems. Key elements include:

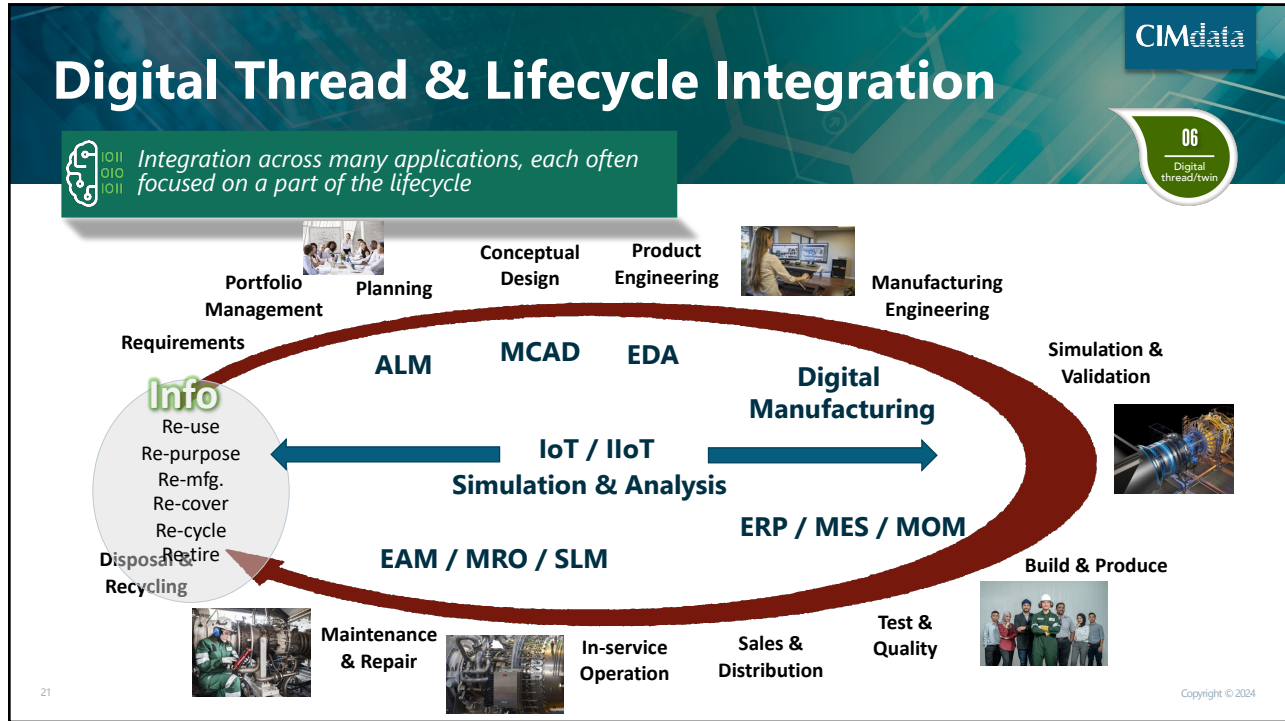

- Lifecycle Mgt. Scope** (top)
- System Design Architecture (RFLP)**, **Mechanical Design**, **Electronics Design**, **Software Engineering**, **ALM**, **PDM**, **Product Reqs.**, **Modeling & Simulation**, **SPDM**, **MBD**, **Design For Mfg**, **Tech Docs**, **Digital Factory**, **Supply Chain Mgmt.**, **In Service (SLM)**, **Customers (CRM)**, **ERP**, **Costing**, **Inventory**, **Procurement**
- IoT/Digital Twins** and **Tact/AGV** are shown as enablers connecting design and production.
- BOMs, Reqs, Configurations, Portfolio, Change Mgmt...** are shown as foundational data elements.

CIMdata06
Digital thread/twin

The Ultimate Vision

 Many credit Vickers as the first person to use the phrase—"digital twin"

"The ultimate vision for the digital twin is to create, test and build our equipment in a virtual environment. Only when we get it to where it performs to our requirements do we physically manufacture it."

We then want that physical build to tie back to its digital twin through sensors so that the digital twin contains all the information that we could have by inspecting the physical build."

John Vickers, Manager,
NASA's National Center for
Advanced Manufacturing

23 <https://www.forbes.com/sites/bernardmarr/2017/03/06/what-is-digital-twin-technology-and-why-is-it-so-important/?sh=783735a22e2a>Copyright © 2024

CIMdata07
IoT & PLM

IoT & PLM

 Successful IoT enabled strategies require a strong PLM foundation

- A truly successful IoT strategy requires far more than collecting and analyzing data, and taking an action on it
- Products can benefit from it all-through their lifecycle
 - The why of IoT seems clear and solid, but the what and how aren't...
 - Research shows that success typically requires the ability to work cross-functionally...to drive process transformation not just at the front end, such as in the field, but all the way across the back office that support the front in scalable ways (Genpact Research Institute, 2016)
- PLM acts as the cross-functional process and data backbone, a necessary requirement for success in IoT-enabled strategies

Big Data & Analytics

09
Big data & analytics

Another critical element—enterprises must be able to mine it to gain actionable insight

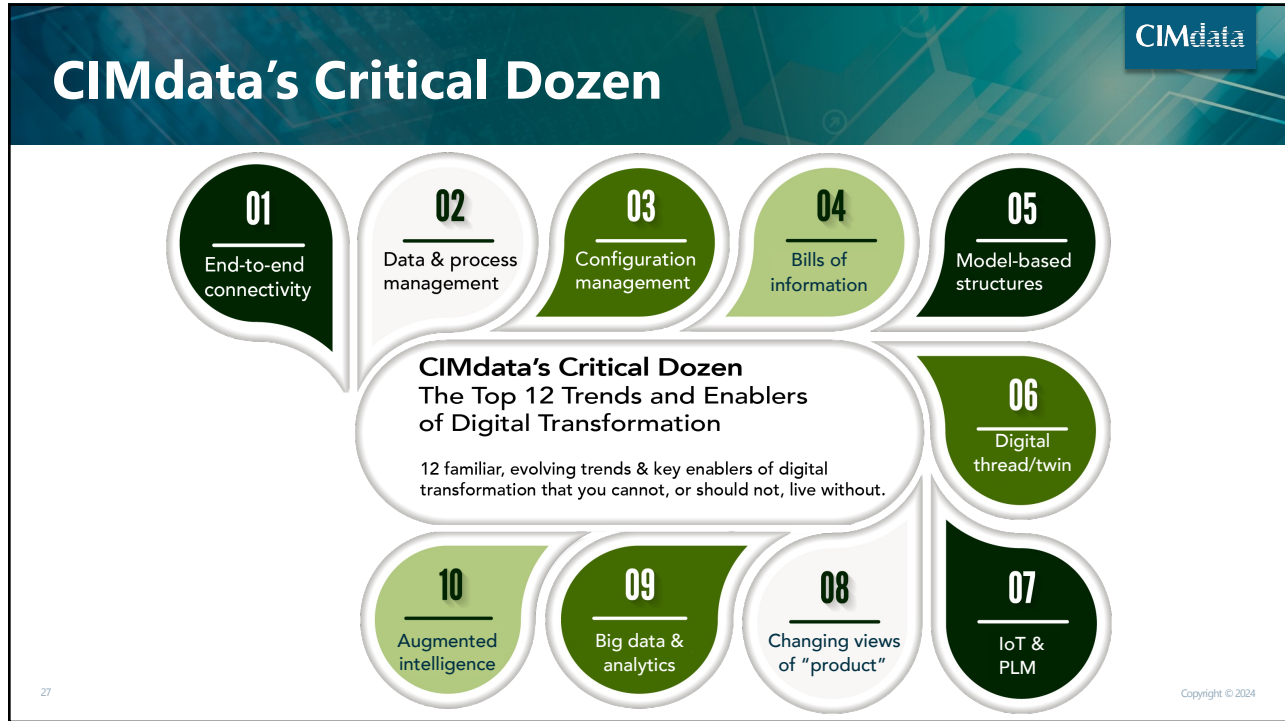

- PLM essentially helps close the loop for Big Data from IoT, IIoT, and other sources, providing an essential link to digital twins
- Big Data is:
 - Growing at an unprecedented pace
 - Content management, data lakes, data marts, specialized file systems, data services and metadata will be the new “logical” data warehouse
- Most data collected is not used at all or poorly
- To create new value, organizations must treat data as an asset
- Data governance is critical—and you provide that

PLM Road Map™ & PDT North America 2024—8 May 2023

Augmented Intelligence

This is where we are at

- **Augmented Intelligence** or intelligence augmentation (IA) is not about replacing human intelligence but rather about amplifying or augmenting it by enabling humans to make use of the large volume of data we're generating by combining human and machine intelligence

"Over the next decade, AI won't replace managers, but managers who use AI will replace those who don't."

Erik Brynjolfsson and Andrew McAfee, HBR (2017)

CIMdata

Some Definitions

 What is artificial intelligence, machine learning, and deep learning?

- **Artificial Intelligence** (AI) is the ability of a machine to perform tasks that normally require human intelligence, such as visual perception, speech recognition, decision-making, and translation between languages
- **Machine Learning** (ML) is making predictions and recommendations by algorithmically detecting patterns in available data and information, and improving the algorithms over time with new data and information, without explicit programmed instructions
- **Deep Learning** (DL) is a type of machine learning in which a cascade of interconnected layers of processing units extract increasingly complex features from the output of previous layers, leading to a hierarchy of concepts that can help make determinations about new data

AI ML DL

CIMdata

Generative AI

 The AI revolution is upon us

10
Augmented intelligence

- Deep-learning models that can generate high-quality text, images, and other content based on the data they were trained on
- AI has gone through many cycles of hype, but even to skeptics, the release of ChatGPT seems to mark a turning point
- OpenAI's chatbot, powered by its latest **large language model** (LLM), can write poems, tell jokes, and churn out essays that look like a human created them
- Prompt ChatGPT with a few words, and out comes love poems in the form of Yelp reviews, or song lyrics in the style of Nick Cave

PLM Road Map™ & PDT North America 2024—8 May 2023

RAG's Importance

 *Setting the appropriate context using Retrieval-Augmented Generation (RAG)*

10
Augmented Intelligence

- When a LLM doesn't have enough information or has no contextual knowledge of a topic, it is more likely to hallucinate, and provide inaccurate or false responses
- AI researchers and developers have been exploring numerous RAG technologies, including:
 - Text chunking, query expansion, hybrid search, knowledge graph, reranking, and others
- An LLM needs the right data so that it doesn't have to make things up, and you need the best search technology to find the right data

31 Source: <https://cloud.google.com/blog/products/ai-machine-learning/rags-powered-by-google-search-technology-part-1> Copyright © 2024

How RAG Impacts Enterprise Search

 *Maximizing ROI: How RAG Impacts Enterprise Search Strategies—from Sinequa*

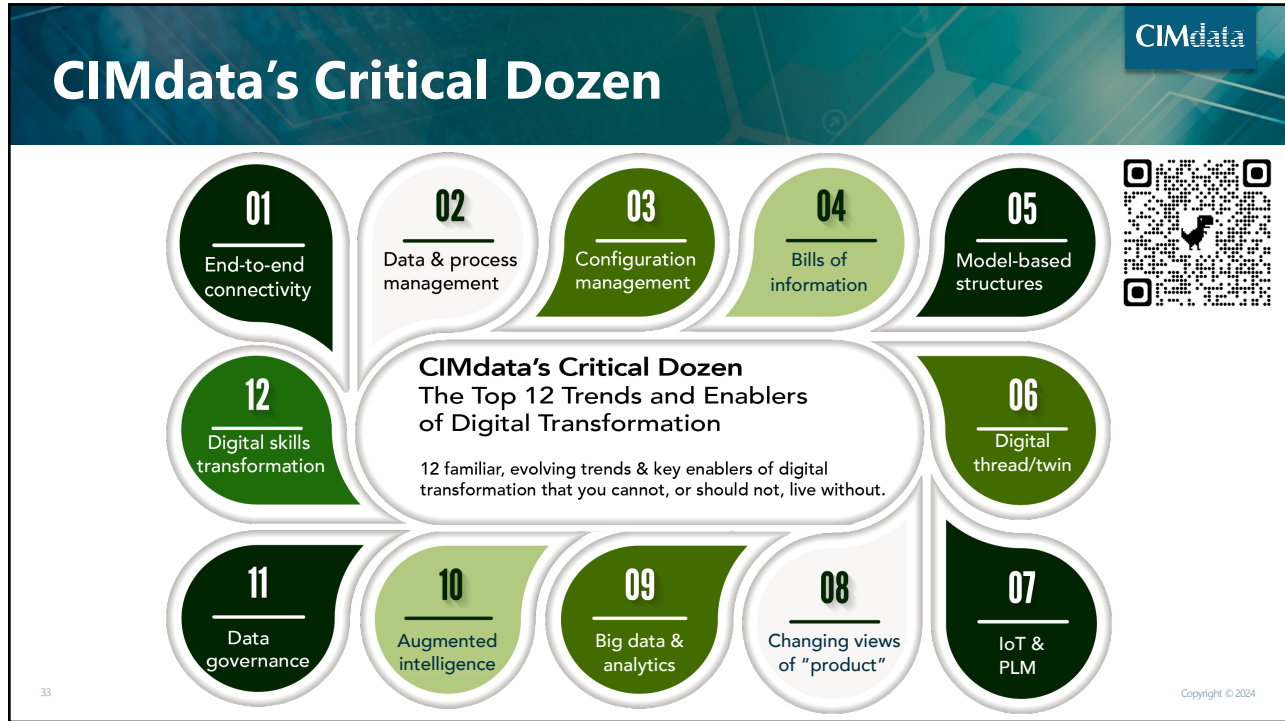

10
Augmented Intelligence

- RAG is leading the way in revolutionizing enterprise search
- RAG's combination of information retrieval & NL generation not only improves search relevance and precision but also...
 - It optimizes information resources, empowers decision-making, enhances business intelligence, and yields a significant ROI
- As organizations continue to use RAG, they will pave the way for a future where information retrieval goes beyond traditional boundaries, driving businesses towards greater efficiency & innovation

Value Drivers for Digitalization of the Product Lifecycle

PLM Road Map™ & PDT North America 2024—8 May 2023

Digital Skills Transformation

- A well-defined skills program is **multi-faceted**, and should include organizational, process, technology, content & delivery considerations
- An education & training framework, and related implementation & support structures **cover different organizational processes & supporting platforms**
- **Different experience and skill levels need to be incorporated** into one repeatable standard, applicable throughout an enterprise
- With the appropriate structure in place, an enterprise is in a better position to **proactively handle growth, reduce employee turnover,** and **successfully deal with** the **changes** encountered

CIMdata

There are Many Reasons to NOT Change

 You will hear many of these at one time or another

That's someone else's responsibility. It won't fly. No es mi problema. It will take too long. It's hopeless. We can't take the chance. We've always done it this way. It's too complicated. What's in it for me? They won't fund it. It's too radical. It's too political. We don't have consensus yet. It's contrary to policy. We have too many layers. It's too radical. We're doing OK as it is. It can't be done. It's not my job. There's too much red tape. We don't have the staff. We tried that before. It's against tradition. It needs more thought. Another department tried that. It's not our problem. They're too

CIMdata

Organizational Change Management

 Responsible party: program manager & project managers—main elements

- **Plan development**—define and manage the overall organizational change management plan
- **Facilitation**—create the materials and execute the plan
- **Communication**—publish program related information to the general user/corporate community
- **Education**—define & deliver seminars/presentations that educate
- **Sales & Marketing**—work with users and corporate management to sell & market the program

38 Copyright © 2024

Value Drivers for Digitalization of the Product Lifecycle

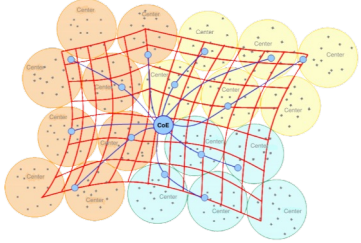

PLM Road Map™ & PDT North America 2024—8 May 2023

Organizational Change Management

 Executing the organizational change management plan

- Maintain a detailed Organizational Change plan
 - You need to sell the solution & its value
- Communicate with end users early & often
 - Permanent agenda item on monthly presentations
 - Regular educational events
- Do road-shows in house to demonstrate functionality to all
- Obtain additional resources to help with organizational change efforts:
 - Communication Specialist

Acceptance by the organization is not possible without this communication & marketing effort!
