

# LINKING GLOBAL DEVELOPMENT & PRODUCTION USING 3DEXPERIENCE

## Improved collaboration, simplified design engineering and process planning across locations

### The Challenge

As an international producer of tooling and equipment technology for the automotive industry, 3CON brings high-tech into the automotive production.

Establishing branches in Germany, the USA, China and Mexico, the Austrian-based company is increasing its international orientation. Moreover, customer's demands such as for innovation, flexibility and adherence to delivery dates increased as well.

Thus, 3CON saw the long-term objective of constantly improving its internal processes while at the same time maintaining high-quality standards. The producer was looking for a solution that addresses three challenges especially: Improving collaboration between its different sites in different countries, restructuring the workflows within teams, and optimizing version and approval management.

### The Solution

Attracted by the possibility of combining many applications in one database, 3CON opted for the 3DEXPERIENCE platform by Dassault Systèmes. The platform enables the producer to link its global development and production sites.

TECHNIA's experts guided 3CON along the journey to ensure a successful implementation of the new software: from consulting on how to structure international workflows efficiently to user training in order to get the most out of the powerful platform.

### The Results

With this solution, 3CON was able to improve the global collaboration of its employees and ease design engineering and process planning.

*"The consistent database that we now have with the 3DEXPERIENCE platform has enabled us to fully achieve our two major objectives of worldwide standardization and optimized release management."*

*-Hannes Auer,  
Founder and CEO, 3CON*
